7 PILLARS OF WELLNESS OVERVIEW

HYDRATION

- Drink ½ your weight in ounces of purified water every day. For example: If you weigh 200 pounds, drink at least 100 ounces of water per day.
- For better hydration at the cellular level, drink fluids that contain nutrients and electrolytes. This will help flush toxins and provide us with more energy and endurance. Whatever electrolytes our body does not use will be stored for future use. Ask us about a scientifically formulated hydration drink we recommend. Other options include adding Celtic Sea Salt or Redmond Real Salt to purified water.
- At meal time, sip liquids. Drinking too much during meals can cause poor digestion.

HEALTHY EATING

We want to fuel our bodies with nutrient rich foods and eat at the right times. To achieve this we can share our Traffic Light Eating and Intermittent Fasting guides.

SLEEP WELL

Turn off electronic devices 1 hour before bed, keep electronic devices away from you bed, protect your eyes from blue light emitted from digital screens, and allow your body to wind down before bed. Taking a good nutritional supplement before bed helps to promote better recovery from both the physical and emotional stress from the day. Please ask us about our sleep nutritionals, we'd be happy to provide you some samples for evaluation.

EXERCISE

Let's explore what might be the best exercise for you and why. For some people we recommend a Burst Training Program. Burst Training naturally produces HGH, the "fountain of youth hormone" that is produced in the pituitary gland and stimulates growth, cellular reproduction, and regeneration. For better results please ask us about adding good Pre and Post Workout nutritionals. (Check with your doctor before starting any exercise program.)

NUTRITIONALS

Almost 99 percent of the world's daily calorie intake can be traced back to soil, and that's a problem because nutrient depletion in soil results in food that is deficient in the nutrients we need for optimum wellness. And because science is showing us that when it comes to nutrition one size does not fit all, ask us about our Health Scan and HIPPA compliant DNA Lab Test Kit that provide you a personalized health report with nutritional recommendations.

REDUCE STRESS

We want to manage our stress levels because stress throttles our cortisol levels. Cortisol is a stress hormone that causes us to experience the "fight or flight" response; that over prolonged periods of time can cause various health conditions. Scientific research shows that elevated cortisol levels can; affect our memory & cognition, lower immune function, decrease bone density, increase insulin levels, raise blood pressure, increase cholesterol levels, and cause weight gain, heart disease... and more.

Ways to manage stress may include: meditation, paced breathing, exercise, enjoying the outdoors, saunas (hot/cold therapy), massage therapy, proper nutrition, hobbies, travel, reading, and getting 7-8 hours of deep sleep.

DETOX

Of these 7 Pillars of Wellness, many scientists believe detoxification may be the most important pillar. Toxins cause inflammation & dysfunction at the cellular level and, and can affect our genetic expression by triggering various health conditions. Detoxing and creating a healthy gut microbiome are keys to prevention and healing!

If we're not healthy at the cellular level, we're not healthy. We want to fix the cell to be well so that we can achieve optimal wellness! Ask us what detox options might be best for you. And when it comes to prevention, we can show you how to eliminate toxic household cleaners, personal care products (skin care, shampoo, tooth paste, deodorant, hand wipes/sanitizers...), and reduce the harmful effects from EMF radiation (5G, Wi-Fi, Bluetooth...).

These 7 Pillars of Wellness can help us close the gap between our "health span" and "life span" so that we can feel, look, and perform better... and reach our God given potential!
